SINK WARE
COLLECTION

Paco Jaanson sinks being as functional as they are beautiful ensure that preparation and clean up are easy and enjoyable. The Paco Jaanson Sinkware Collection inspires most modern designs and styles. When you purchase a Paco Jaanson sink you receive Europe's best backed by a 25 year warranty.

All Paco Jaanson stainless steel sinks are manufactured to high standards with 304 Grade Stainless Steel and European design plug and wastes.

The finest nickel bearing stainless steel added at the steel making process guarantees that each and evey sink is stainless all the way through.

Heavy, strong, durable sinks that with proper care and maintenance will stand the test of time.

Practical, affordable, timeless designs complete this range to cater to a grand finish to any kitchen, butler pantry or laundry.

The real difference is in the signature finish

Sardinia Undermount

Sardinia under counter is perfect for the aesthetically low key kitchen. Whilst specious and gentle on the eye, Sardinia under counter brings to your kitchen the avant-guard look, desired by today's designers.

Sardinia stainless steel sinks feature a Polished Finish.

This signature finish is the result of an extensive polishing process that creates an extremely consistent and luxurious appearance which is also smooth, hygienic, and extremely easy-to-clean*.

Sleek, contemporary basins have been a common choice of designers whose clients still want to keep a traditional design theme.

The desire for a cleaner appearance around the sink has lead to the use of ceramic sinks as well as traditional stainless steel sinks*. The 570x500 also has the option of a white polyurethane cabinet to suit.

Suggestions For The Care & Cleaning Of Paco Jaanson Stainless Steel Sinks

Each sink's surface is created to harmonize with any colour scheme and décor. And, like fine silver, its beautiful finish becomes lovelier with use and age. It will give a lifetime of service with proper care and maintenance.

For regular routine cleaning use a non-abrasive cleaner. Liquid dish soap or a mild vinegar solution can be used. This will keep the sink free from residue and grease from food preparation and dish washing without scratching either the bowl area or the "mirror finish" counter-top area of the sink.

Since the detergent used for washing dishes may not be thoroughly effective in removing grease residue. The best result can be obtained by direct application of a non-abrasive household cleaner. Cleaning products containing a mild abrasive and recommended by their manufacture for use on stainless steel sinks are generally satisfactory. Always read the product-use directions on the package before using the product on the sink.

After heavy usage and whenever a thorough disinfecting cleaning is required, use an abrasive disinfecting cleansing powder. Most of these contain bleach, an effective ingredient for killing germs. They will also help to maintain the sink's natural shine and lustre by completely removing all traces of any surface contaminant which may remain after regular routine cleaning. Please note, however, that an abrasive cleaner should only be used on the bowl area of the sink... Never on the "mirror finish" counter top area of the sink.

Anytime the sink is cleaned a final step is to give it a thorough rinse and then wipe the surface dry.

Each stainless steel sink is easy to keep clean. Simple everyday maintenance, as outlined above, will ensure its beauty will last longer. The best method of "preventive maintenance" is to ensure that the sink is clean, dry and exposed to room atmosphere when not in use.

Installation

Installation of each sink is the responsibility of the customer or the customer's installer. Installation by qualified trade persons is recommended.

Check the sink for blemishes or imperfections before installation, as the cost of delivering and installing a replacement sink will be the responsibility of the customer.

Use the actual product measurements for cut outs. Measurements are supplied by Paco Jaanson as a guide only. Paco Jaanson are continually seeking ways to improve the design specification, aesthetics and manufacturing techniques of its products. As a result alterations to the specifications and dimensions of the products and designs occur continually

By installing the sink, the customer accepts that it is free of blemishes and or imperfections including scratched, dents, spotting, discolouration and rust.
